

Galvanic Facial Treatment

What is galvanic iontophoresis facial?

If you've been using countless skin products to zap away wrinkles, brighten up the skin or even cleanse and exfoliate, you could be wasting your time. The skin blocks the absorption of almost all products applied directly on top of the pores, which is why even the most expensive skin care products will not make any difference to the texture or tone of your skin.

Iontophoresis therapy is the therapeutic introduction of ions of soluble salts into tissues by means of electric current; a form of electro-osmosis. It is a process of increasing the penetration of drugs into surface tissues by the application of electric current. Galvanic facial treatments offer a solution for making those skincare products work. The machine promotes the absorption of products used on the skin, driving them deeper into the pores so that they can work. It also helps to tighten up the skin, helping to reduce the appearance of fine lines and wrinkles for good.

How Galvanic Facial Therapy Works

The galvanic hand piece is used to direct a galvanic current of ions directly into the skin. These positive and negative ions act like a magnet on top of the skin's surface, and will slowly push the product lying on the skin's surface down into the deeper layers. The skin can then absorb the treatment within seconds and the electric energy also firms up, tones and tightens the skin during the session. Most sessions last for just 10-15 minutes, but are combined with a full facial treatment that can last up to an hour.

Micro current energy has been documented and studied for over a century, and galvanic

treatments use very low-frequency impulses so there is no risk of burning or electric shock. The electricity triggers cellular turnover so that any damaged tissues can repair and heal quickly, and even though the procedure does not injure the tissues, it does ‘trick’ the cells so that they begin to undergo the healing process. Galvanic facial treatments have a proven track record in Europe, and have been used for decades as an anti-aging solution.

The galvanic gel applied to the skin directly before the treatment is also effective for toning up and brightening up the skin, and can help to calm down inflamed skin while stimulating the tissue as a gentle massage. The micro massage treatments stimulate deep under the skin’s surface, so the treated area will not be aggravated in any way.

Key Benefits of Galvanic Facial Therapy

Galvanic facial therapy is considered a complete skin reconditioning system and offers benefits for all skin types. It can be used to:

- Heal acne scars
- Eliminate fine lines
- Reduce or eliminate wrinkles
- Get rid of superficial scars
- Buff and tone up the skin
- Reduce puffy eyebags or the appearance of dark circles
- Tighten up loose skin
- Even out the skin tone
