

JETT PLASMA COLLAGEN PRODUCTION AND LIFT

Riana's Health Skin Care Clinic

Jett Plasma eyelid rejuvenation & Lesion Removal at a Glance

1. What is the Jett Plasma Treatment?

The plasma eyelid rejuvenation treatment is the next generation technology for skin tightening and collagen production. At Riana's Health Skin Care Clinic, we use the Jett Plasma Lift medical. This Plasma eyelid rejuvenation treatment is the first patented direct current electro-cauter in the world, and is made in the Czech Republic. The Jett Plasma Lift medical uses new technology, based on electrical discharge- Plasma. Plasma discharge is generated by safe high voltage-between the tip of the device and the treated area. Due to its very thin

discharge, it is possible to treat the area around the eye, resulting in what has become known as a "non-surgical Blepharoplasty".

Plasma is the fourth state of matter after solids, fluids and gas. It is able to produce a significant amount of collagen contraction and production in the skin in areas we were previously not able to treat as effectively, non-surgically.

The discharge of plasma can also be used to treat other skin lesions such as skin tags, small moles, seborrheic keratoses and Syringomas.

2. What areas can be treated with the Jett Plasma lift medical?

The Jett Plasma can be used on any part of the skin for removal of warts, skin tags, small moles, seborrheic keratoses and Syringomas, or it can be used for the correction of scars. However, the main feature of this new treatment is that it can be used for non-surgical Blepharoplasty or plasma eyelid rejuvenation around the eyes particularly for saggy upper eyelids, crows feet or ageing lower eyelids.

3. How is the Jett Plasma treatment done?

Jett Plasma Lift Medical has 8 intensities and therefore it can be used for multiple purposes. After some local anaesthetic in the treated area, the device is applied to the area. The client experiences some heat, but it is completely tolerable. This "heat" is what creates the response desired in the skin leading to collagen induction/production.

4. When does one begin to see results?

Results can be seen after one treatment. Up to four treatments may be necessary for severe cases. Results are seen to improve from day 1 right up to day 90, post-treatment. For long lasting effects, maintenance treatments are recommended every 18 to 24 months after achieving your initial result.

5. What are the benefits of this treatment?

Skin tightening and texture improvements are the biggest benefits. One to four sessions are needed. Most clients will respond effectively after one session. You can expect to look younger and fresher and over time, your skin will respond by naturally building more collagen and increasing elastin.

6. What are the contraindications of this treatment?

- Epilepsy
- Pregnancy
- The presence of metal joint replacements in the body
- Pacemaker
- Ongoing inflammation

JETT PLASMA COLLAGEN PRODUCTION AND LIFT

Riana's Health Skin Care Clinic

- Skin lesions
- Cancer
- Varicose veins

6. What can I expect after the Jett Plasma Treatment?

Swelling does occur for 2-5 days post treatment. This swelling can be significant enough to warrant social down time. There is minimal discomfort afterwards, but it truly isn't significant. Skin contraction takes 2-6 weeks post treatment.

Before and after photos of a salon client; consent was given.

Before Jett Plasma

Directly after treatment

7 days after - all scabs are off.

Look at changes: Top lid lifted - eyeliner is visible. Wrinkles are softer and smoother.

Two weeks after treatment

One week after treatment

Two weeks after treatment

My client commented by saying:

- During treatment: Hot but not at all painful.
- After treatment: Hot, slightly swollen and red.
- Next day: swollen, red and less hot.
- One week after treatment: scabs have fallen off. One or two scabs left. Skin feels smooth and tight. Many said: "you look so good"
- Two weeks after treatment: Skin shines, lifted and completely healed.
- Will I do it again? Yes, as my eyes are open and I can see my eyeliner again.
