Jett plasma skin treatments

Jett Plasma Skin Tightening

JETT PLASMA is a revolutionary technology for skin tightening using plasma (formed through ionisation of atmospheric gases) to stimulate & contract the skin, causing tightening and lifting.

What is Plasma?

Plasma is one of the four fundamental states of matter, the others being solid, liquid, and gas. Plasma has properties unlike those of the other states.

Plasma is an ionised gas composed of ions and electrons, which is created by the separation of electrons from the electron shell of gas atoms or molecule rupture (ionisation).

How does Jett Plasma Skin tightening work?

The Jett plasma hand piece created ionisation while hovering the instrument over the skin this subsequently creates a reaction in the tissues. The plasma energy flow stimulates new collagen formation, it stimulates elastin fibres, improves sun damaged skin, it reduces wrinkles and it smooths the skins surface.

This treatment does not involve cutting, injecting, burning or removing of skin or tissue.

It is particularly good at working with small areas of heavily lined skin such as upper and lower eye, 'smoker's' lines over the mouth and around the belly button area.

How pain full is a Jett Plasma treatment?

A local anaesthetic is used before commencement of the procedure. So the pain from the treatment should be minimal. The healing process can cause some mild discomfort but over the counter pain relief can be taken to help.

Are there any side effects from Jet Plasma?

The side effects are immediate and may include swelling & reddening of the treated area for 2-3 days. The healing process will include crusting (which should be left to fall away naturally) over the course of about a week.

Jett Plasma for all skin abnormalities

Riana's Health Skin Care Clinic

Treatments can sometimes lead to more prolonged redness and swelling, while the skin recovers, this is more likely when the eye lids or areas close to the eye are treated. It can take up to 7 to 10 days to fully recover for some individuals.

Makeup can be applied as cover where needed but should not be applied for 24hrs after the treatment. The results are instant and improve over the next 2-4 weeks.

Which areas can be treated with Jett Plasma?

Most areas of skin can be treated it can be used for fine lines & wrinkling of the face or body such as, upper & lower eye area, smoker's lines, facial lines, belly button area, thighs, cleavage, décolletage.

It can also be used for correction for scarring (including acne scarring), skin laxity, hyper-pigmentation, removal of warts skin tags etc.

How long does a Jett Plasma treatment take?

The treatment is relatively short but we allow an hour for preparation, anaesthesia and the treatment.

Does the Jett Remove Skin Lesions?

Yes, it removes all skin lesions, including: sebaceous hyperplasia, milia, skin tags, fibromas, broken capillaries and cherry angioma's.
